
Awesome Geometric Algebra

Release 0.0.1

Utensil Song

Jul 11, 2020

CONTENTS:

1	The Vision	1
2	Books	3
3	Papers	5
4	Notes	7
5	Videos	9
6	Physics Papers	11
7	Indices and tables	13
	Bibliography	15

THE VISION

This is not going to be just another curated list of Geometric Algebra/Calculus resources inspired by [awesome](#) lists, and it will not be just maintaining one `README.md`.

The preliminary result of this work is rendered at <https://awesome-geometric-algebra.rtf.d.io> . There's almost nothing yet.

The vision for this work is:

- **Citation-based:** every resource collected here will use [sphinxcontrib-bibtex](#) to maintain the citations in the familiar form of `.bib` files, including books, papers, articles and online resources like online pdf files, blog posts, videos, as well as software packages.
- **Web-based:** almost all of the citations will have the “url” property, at least linking to related information if not directly consumable.
- **Multi-perspective:** every resource collected here thus can be referenced by label multiple times like in a paper, so it can live in different “lists” from different angles.
- **Broader view:** Geometric Algebra is related to many areas of Mathematics, and has applications in Physics, Computer Science and other areas, and its pros and cons can only be identified in a broader view.
- **Demonstrated:** with the help of [nbsphinx](#) and [Jupyter kernels](#) or [Julia bridge](#) for Python, Julia, Javascript, Haskell, C++, Mathematica etc., existing software packages of Geometric Algebra written in different languages will be demonstrated in the form of Jupyter Notebooks, verified by CI, and a running environment will be setup in cloud [IDE](#), [REPL](#) or [Jupyter services](#) (if no proprietary software are involved), just one click away.
